

# TEAMS PRESENTATION TOOLS

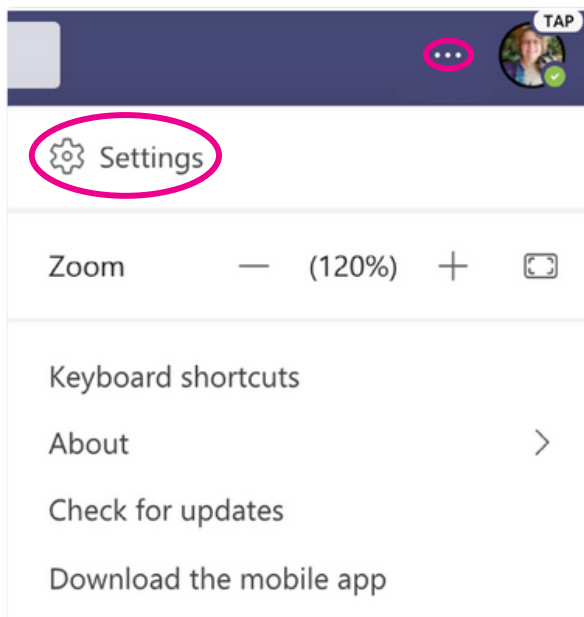

## *Testing Your Microphone and Webcam in Teams*

This guide shows you how to check your microphone and webcam before joining or creating a Teams meeting. If you have any issues with your mic or webcam please contact USF Tech help at <https://www.usf.edu/it/services/client-support>

### Making a test call

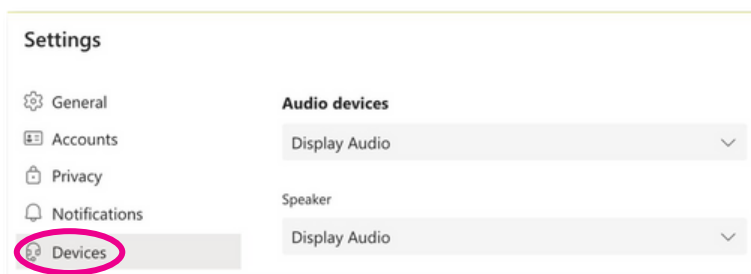

1

To check your microphone and webcam select the **ellipsis [...]** next to your profile picture in the top right corner of your Teams app and choose **Settings**.

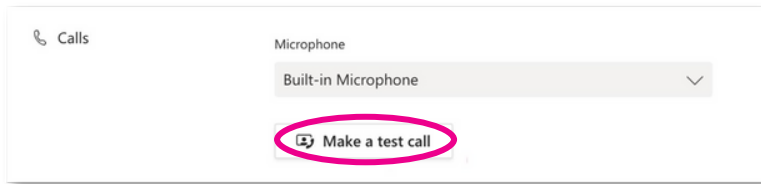

2

Once you are in the settings menu, click on the **Devices** menu option on the left-hand side.

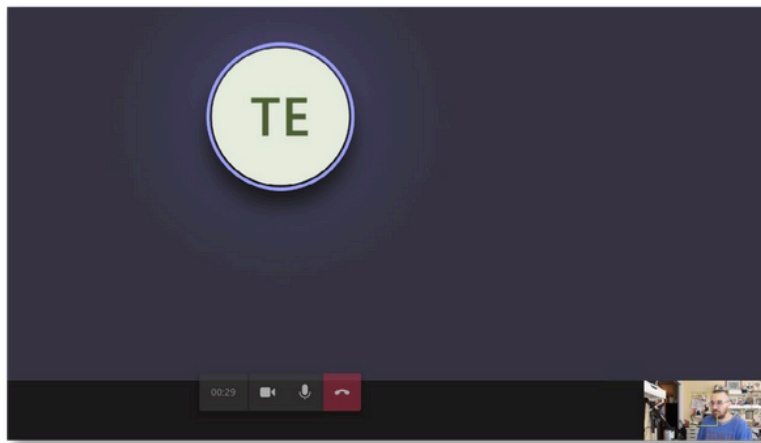

3

From this menu you can choose Make a test call to check and see if your microphone and webcam are working.

4

The Test Call will show you your webcam in the bottom right corner and a recording will walk you through a test of your microphone. Follow the instructions the recording gives you.

5

After you complete the test call, end the call by pressing the red phone icon.

6

If you were able to confirm your microphone and webcam are working properly then you are ready to participate in a Teams meeting. If the microphone and/or webcam did not work properly please contact USF IT at <https://www.usf.edu/it/services/client-support>
