This is the platform you've been waiting for.

Share your solution for infrastructure resilience.

Strong interconnected infrastructure systems are essential for a secure and resilient energy distribution network. We invite you to submit your solution, and join the collaborative efforts between private and public entities working to protect our communities from unexpected and malicious threats.

Resilience Week 2024 will bring together government agencies, academic institutions, national laboratories, and industry stakeholders dedicated to enhancing the resilience of critical infrastructure systems in our communities, cities, and nation.

Topics of interest:

- Control Systems
- Cyber Systems
- Supply Chain
- Communication Systems
- Community and Infrastructure

Paper Review Criteria:

- Innovative interdisciplinary approaches or perspectives
- Clear alignment with focus and topical areas
- Potential for publication in IEEE Xplore
- 2 pages minimum, 10 pages maximum

Please contact the University of South Florida Technology Transfer office representative for submission - Roisin McNally at rmcnally@usf.edu.
